After more than eighteen months the Regional Vision Plan evolved from ideas, concepts and knowledge gathered from public meetings and the Citizen Advisory Group, combined with the guidance and expertise of consultants and local resource experts. The concerted effort of the aforementioned groups together with managing partners produced the Regional Vision Plan. This plan considers the growth of recreational activities alongside the protection of sensitive natural resources for the surrounding communities today and for future generations.

The two-year effort was structured to facilitate a quality Regional Vision Plan for the Pikes Peak region developed by citizens, government agencies and technical experts. The Citizens Advisory Group consisted of a broad range of users and stakeholders including hikers, miners and environmental groups to name a few. The Technical Advisory Group were local resource planners that were recruited to help identity challenges, opportunities and solutions.

This plan considers the growth of recreational activities alongside the protection of sensitive natural resources for the surrounding communities today and for future generations.

Land encompassed by boundaries of the Pikes Peak Multi-Use Plan is owned by six different entities and falls into multiple jurisdictions and spheres of influence. To enact the Vision Plan, each land owner would implement action pertinent to their jurisdiction with the support from partnerships with related nonprofit and for-profit entities.

Implementation for this Pikes Peak Regional Multi-Use Plan involves participation at the federal, state and local level and many potential participants. The scope of the regional Vision Plan addresses an area of more than 128,000 acres and many of the plan recommendations are based on projects that can be seen today such as Ring the Peak.
